Plantwide Control is a solutions provider specialising in control systems, automation and electrical projects and services.

Our core expertise is in the design, manufacture, delivery and support of electrical and automation solutions and services to the industrial sector. We are committed to using high quality engineering and electrical resources, and providing them with the latest software, training and tools, enabling us to deliver robust and tailored systems at any point of an operation's life cycle. We have aligned with leading partners, giving us the ability to deliver industry leading solutions and support to meet our client's needs and provide them with systems services that are solution over cost driven.

Our vision for Plantwide is to be a 100% New Zealand owned and operated engineering solutions provider that is competitive with international offerings. Our goals include being the most reliable engineering partner for service and support with the capability to deliver turn-key solutions for systems integration and related products consistently designed, manufactured and delivered out of New Zealand.

Plantwide Control and our people hold qualifications and certifications (including engineering and electrical legislation), and our QMS systems are in accordance with international standards. Some of the reasons why we can provide industry leading solutions and services.

CAPABILITY STATEMENT

Automation
 Plantwide designs robust user focused automation and control systems that allow industries to produce goods safely and efficiently. We have extensive experience in the design, manufacture, delivery and support of automation and control systems for a wide range of industries. Our ability to work from feasibility to full scale delivery is a key strength.

Engineering
 Our focus is to design systems that are robust and reliable. We have a full service provider, we understand designing within the budget and we have the ability to deliver systems that are robust and reliable. Our senior team brings extensive experience in designing, commissioning, and optimisation of large-scale projects across a wide range of industries.

Electrical
 The backbone of Plantwide Control is our capability to provide separate electrical services. Not only do we support electrical systems, but provide high quality build standards directly resulting in reliability and longevity of our operations.

Mechanical
 Mechanical engineering and services are included in our offering. We have the ability and skills to deliver quality services and services of mechanical systems.

KEY AREAS OF EXPERTISE

Automation
 Plantwide Control has successfully delivered a range of technical automation and control system projects across Australia and New Zealand. Our senior team brings extensive experience in designing, commissioning, and optimisation of large-scale projects across a wide range of industries.

Engineering
 We specialise in applying and integrating the latest automation technologies in modern manufacturing facilities. Our expertise includes design, installation, testing, commissioning, and ongoing support. We have a proven track record in delivering high quality automation solutions across a wide range of industries.

Electrical
 Our commitment to delivering robust electrical solutions extends beyond project execution, with a focus on preventive maintenance, troubleshooting, and system optimisation. We have a proven track record in delivering high quality electrical services across a wide range of industries.

Mechanical
 Our commitment to delivering robust mechanical solutions extends beyond project execution, with a focus on preventive maintenance, troubleshooting, and system optimisation. We have a proven track record in delivering high quality mechanical services across a wide range of industries.

KEY AREAS OF EXPERTISE

Transport and Control
 Experience across systems with a range of products and a full range of services. We have extensive experience in the design, manufacture, delivery and support of transport and control systems for a wide range of industries. Our ability to work from feasibility to full scale delivery is a key strength.

Material Handling
 Capability includes robotic pick-and-place, sorting, and integration with existing systems. We have a proven track record in delivering high quality material handling solutions across a wide range of industries.

SCADA/PLC Integration
 With a focus on the core experience, Plantwide Control SCADA systems have detailed alarming, advanced reporting, real-time monitoring and analysis, and KPI data, graph point analysis and MES integration. Plantwide are certified systems integrators of all Rockwell, Ignition, Plant SCADA, and various visualization packages. The quality of our SCADA visualizations has been a large driver for our success.

Support
 Plantwide has a 24/7 support capability that does not require a service agreement.

PROJECT SUCCESS

Our involvement in the successful delivery of leading-edge projects at a global scale demonstrates the ability to handle complex automation and control system integrations. Our core focus with any installation is to provide a robust, user-focused system that is installed to the highest of quality.

PROJECT SUCCESS

TECP - SCADA Control & Integration
 Plantwide Control has played a critical role in standardising SCADA systems across multiple TECP sites, ensuring seamless integration, improved reliability, and enhanced operational visibility.

JIS Australia - Automation & Process Improvements
 As recognised experts in product transport and handling, Plantwide Control was selected by JIS Australia to support their engineering, improvements, and sustainability team in identifying and meeting operational benchmarks.

SMS - Automated Roll Forming Line
 Plantwide Control successfully assessed the mechanical, electrical, and automation integration for a fully automated roll forming line, ensuring a seamless and efficient production process.

plantwidecontrol
 TOTAL INDUSTRIAL SOLUTIONS

PLANTWIDE CONTROL LIMITED // NEWS // JULY 2024

PLANTWIDE IS GROWING
 Plantwide's New Zealand footprint continues to expand, with a new Christchurch engineering office, plus Auckland and Dunedin outputs now fully mobilised. We are more confident than ever in our ability to deliver high-end site works given the calibre of our trades, tooling and resources!

MILESTONES
 A SAT testing phase has started on a Plantwide Control dynamic load balancing system, powered by an AB/Rockwell PLC. Our scope includes using an emulate3d simulation to validate throughput and functionality and test logical decisions, as there are dynamic adjustments made to items in flight to respond to systems downstream. This system is designed to shift ~500tons of material across a day through chilling, freezing, storage, palletising, reject processes.
 We have confirmed a lease location for our NZ based panel and assembly shop. This will be up and running closer to the end of 2024. This is the next step in our ability to manufacture fully type tested electrical panels to the new AS/NZS 61439 standard, up to 400A. Also giving us the ability for NZ based mechanical assembly and factory acceptance testing for our systems.

TEAM NEWS
HOW A WINDSCREEN WIPER DERAILED EARL'S ROAD TO A THIRD LE MANS VICTORY...
 Last weekend one of Plantwide's directors Earl Barber took part in the Le Mans 24hr endurance race, driving a £1.6m Cadillac LMP1, with a supporting £200m budget allocated to cutting-edge engineering and advanced technology.
 Leading the race from around the 14th mark, the Cadillac LMP1 seemed poised for victory... until rain began to fall, and the £5 windscreen wiper fell off! Unfortunately, this forced a pit stop, where the car lost its lead, and ultimately finished in 7th place. Besides the massive achievement of getting over the line 24hrs later (mostly in one piece) this underscores the importance of meticulous maintenance scheduling and the availability of critical spares. Despite significant resources, a minor component failure derailed the Cadillac LMP1's performance, highlighting that every part, no matter how small, must be rigorously maintained.
 So here's a reminder that Plantwide Control are not only specialists in industrial automation and control system design through delivery, we also offer a full suite of servicing, support, maintenance and shut-down contracting options. Also to check your windscreen wipers are firmly attached.

IN THE WORKS
 Plantwide Control major project in Wagga Wagga, Australia, involved in working on a meat works project where 120m conveyors were installed, plus control system integrations to existing and other new plant equipment.
